WHY TURFGRASS?

Healthy turfgrass makes a measurable and a meaningful difference in our daily lives. Healthy grass releases oxygen, cools the air, prevents erosion and helps control pollution by filtering both air and water. This living carpet creates more aesthetically pleasing lawns, improves living conditions, increases property values, serves as a basis for recreation by way of golf courses and sports fields, and is a major economic driver. We work exclusively with the Virginia Tech Turfgrass Science Team, supporting natural grass research throughout the Commonwealth and beyond.
